Aspen HYSYS (or
simply HYSYS) is a
chemical process
simulator used to
mathematically model
chemical processes,

from unit operations to full chemical plants and refineries. HYSYS is able to perform many of the core calculations of chemical engineering, including those

concerned with mass
balance, energy
balance, vapor-liquid
equilibrium, heat
transfer, mass transfer,
chemical kinetics ...

without any manual

data transfer. This streamlines relief-sizing analysis eliminating work in any external third party tools. Prior to the new Aspen HYSYS solution,

relief-sizing
workflows demanded
the use of the Aspen
HYSYS simulator for
process flows and
physical properties
and additional tools to

complete
