Perry is an alcoholic beverage made from fermented pears, similar to the way cider is made from apples. It has been common for centuries in England, particularly in the Three Counties (Gloucestershire, Herefordshire and Worcestershire); it is also made in parts of South Wales and France, especially Normandy and Anjou. It is also made in Commonwealth countries such as Canada, Australia and New ...

This is a list of notable chemical engineers, people who studied or practiced chemical engineering. The main list is those who achieved status in chemical engineering or a closely related field such as management or science. At the foot of the page is a list of people with chemical engineering qualifications who are notable for other reasons, such as actors, sportspeople and authors.

Featuring contributions from more than 160 global experts, Marks' Standard

Handbook for Mechanical Engineers, Twelfth Edition, offers instant access to a wealth of practical information on every essential aspect of mechanical engineering. It provides clear, concise answers to thousands of mechanical engineering questions.

Solvent extraction is a useful and common technique in many solid sample preparations. The frequency of use of LSE and of Soxhlet extraction in particular compared to other sample preparation techniques is considerable, as shown in Figure 1.1.1. Many extractions are done on the initial sample.

Darcy-Weisbach Formula A common form of the Fanning equation (including minor losses and with uniform pipe diameter and reference velocity for  $K_s$ ) is:

A common need in engineering calculations is to integrate an equation over some range to determine the total change. For example, say we know the volumetric flow changes with time according to  $(\frac{d\nu}{dt} = \alpha t)$ , where  $(\alpha = 1)$  L/min and we want to know how much liquid flows into a tank over 10 minutes if the volumetric flowrate is  $(\nu_0 = 5)$  L/min at  $(t=0)$ .

James E. Gallagher, in Natural Gas Measurement Handbook, 2006 Gas Density, pTZ Method The equation of state method to predict the mass densities ( $\rho_{tp}$ ,  $\rho_b$ ) using compositional analysis is referred to as the pTZ method in the global community. Preferably, the mass densities should be determined from gas chromatographic results in combination with a selected method (A.G.A.8, GPA 2172).
