Ganymede, a satellite of Jupiter

(Jupiter III), is the largest and most massive of the Solar System's moons. The ninth-largest object

(including the Sun) of the Solar System, it is the largest without a substantial atmosphere. It has a

diameter of 5,268 km (3,273 mi),  
making it 26% larger than the planet  
Mercury by volume, although it is

only 45% as massive.

5/11/2021 · The plasmonic antennas

effect of AgAuNSs broadens the spectral response range to the near-infrared region, and the “hot

electron” injection renders the electrode with more energetic active sites. (3) The MOFs shells, with

matching permittivity, dramatically  
boost the EM field and depress the  
attenuation of the plasmon fringing

field around the AgAuNSs.

The thicker atmosphere traps more

infrared radiation, causing warming of the Earth. Gore argues that carbon dioxide, which is created by burning

fossil fuels, cutting down forests, and producing cement, accounts for 80%

of greenhouse gas emissions.

11/11/2021 · A polymer-bonded

explosive (PBX) is a composite of an explosive crystal, such as HMX, RDX, PETN, etc., and a soft

elastomeric binder, such as hydroxyl-terminated polybutadiene (HTPB), Estane, etc. PBXs are used in a wide

range of civil and military  
applications such as mining,  
construction, as solid fuel in rocket

propellants, and as explosives.
